Kee — What It Is and How It Works

A plain-language guide to the Kee platform for business stakeholders: what problem it solves, who uses it, how a shop gets started, and how the platform runs end to end — no technical background required.

fields for client review

TABLE OF CONTENTS

Written for owners, managers, and anyone evaluating the platform — not developers.

PROJECT OVERVIEW

- 1.1 What is Kee, and what problem does it solve
- 1.2 Business purpose & objectives

WHO USES THE PLATFORM

- 2.1 The three types of users

GETTING A SHOP STARTED

- 3.1 Signing up & paying for a subscription
- 3.2 Managing the shop profile & settings

THE CORE EVERYDAY JOB: SERVING CUSTOMERS

- 4.1 Registering a customer visit
- 4.2 Customer history & the compliance report
- 4.3 The Master Key catalogue, explained simply

MACHINES & MARKETING

- 5.1 Machines & product listings
- 5.2 Advertisements & promotions

RUNNING THE PLATFORM (SUPER ADMIN)

- 6.1 Overseeing shops & subscriptions
- 6.2 Revenue tracking & support

THE COMPLETE PICTURE

- 7.1 End-to-end journey, start to finish
- 7.2 Key benefits
- 7.3 Plain-language glossary

PROJECT OVERVIEW

Why Kee exists, and what it does for a duplicate-key shop.

1.1 – WHAT IS KEE, AND WHAT PROBLEM DOES IT SOLVE

Every time a duplicate key shop cuts a new car, bike, home, or office key for a customer, that visit ought to be recorded — who the customer is, what vehicle or property the key is for, and proof of identity. In most shops today, that record-keeping either doesn't happen at all, or it happens on paper that gets lost, damaged, or is impossible to search later. Kee replaces that paper trail with a simple digital system: a shop owner or their staff fills in a short form on their phone or computer every time a customer comes in, and the platform takes care of the rest — storing the record safely, generating a proper compliance report, and making it searchable months or years later.

Beyond record-keeping, Kee also gives every registered shop a free public storefront — customers browsing nearby can find the shop, see what machines and services it offers, and get in touch directly — and gives the platform owner (the Super Admin) a way to run the whole network of shops, advertise on their behalf, and generate subscription revenue.

1.2 – BUSINESS PURPOSE & OBJECTIVES

COMPLIANCE

Give every shop a fast, reliable way to keep a proper record of every key duplicated or replaced — useful for the shop's own protection and for any future enquiry.

DISCOVERABILITY

Let the public find a trustworthy, verified key shop near them, instead of relying on word of mouth alone.

RECURRING REVENUE

Shops pay a subscription to join and stay active, giving the platform owner a predictable, renewable income stream.

GROWTH

A built-in referral programme rewards shops for bringing in other shops, and the public app is a repeated touchpoint that keeps shops visible to nearby customers.

WHO USES THE PLATFORM

Three distinct groups, each with a very different day-to-day experience.

2.1 – THE THREE TYPES OF USERS

SUPER ADMIN

PLATFORM OWNER / OPERATOR

Runs the entire network. Approves and manages every shop, sets the subscription price, runs advertisement campaigns across the app, tracks platform revenue, and configures shared settings like the list of shop categories, key types, and support contact details. There is one Super Admin team overseeing every shop on the platform.

SHOP ADMIN

A REGISTERED KEY SHOP

The day-to-day user of the platform — the shop owner or a staff member. Logs every customer visit, keeps the shop's profile and documents up to date, lists the machines/products the shop sells, and can post its own listings for other shops or the public to see. Each Shop Admin only ever sees their own shop's data.

PUBLIC VISITOR

CUSTOMERS & THE GENERAL PUBLIC

Anyone browsing the marketing website or the installed app before signing in. Can search for key shops nearby, browse machines and products for sale, see active offers and advertisements, and contact a shop directly — all without needing an account.

GETTING A SHOP STARTED

From "I don't have an account yet" to a fully working shop.

3.1 – SIGNING UP & PAYING FOR A SUBSCRIPTION

A new shop joins Kee entirely on its own, without needing the Super Admin to set anything up first. The owner opens the registration form, enters the shop's name, their own name, and a mobile number, verifies that number with a text-message code, and picks the shop's category from a list (Key Shops, Dealers, and similar). Location is filled in automatically using the phone's GPS, so there's no need to type an address by hand.

The final step is payment: the screen shows the subscription price (plus tax), and the owner pays through a secure checkout screen using a card, UPI, netbanking, or wallet. Only once that payment is confirmed does the platform create the shop's account and log the owner straight into their new dashboard — there is no way to end up with a shop account that hasn't actually been paid for.

WHY THIS ORDER MATTERS

Payment is verified before the account is created, not after. This protects the business from ever having an "active" shop on the platform that never actually completed payment.

3.2 – MANAGING THE SHOP PROFILE & SETTINGS

Once registered, a Shop Admin can return to their Settings screen at any time to update the shop's profile (name, category, address, tax number, optional website), upload a shop logo that appears on their public listing, upload supporting documents such as a licence or ID proof, and change their login phone number or password — every credential change requires a fresh text-message code, so an account can't be quietly taken over even by someone already using the dashboard.

Every shop also gets its own referral code (simply its registered phone number) to share with other shop owners; when a new shop signs up using that code, the referring shop earns a point, visible on its own Referral & Rewards screen.

THE CORE EVERYDAY JOB: SERVING CUSTOMERS

The single task Kee exists for: logging a key-duplication or key-loss visit properly.

4.1 – REGISTERING A CUSTOMER VISIT

Whenever a customer comes into a shop to get a key duplicated or replaced, the Shop Admin opens New Customer on the dashboard and works through one short form: which category the visit belongs to (two-wheeler, four-wheeler, truck, home, or office), the customer's name and phone number (verified by text message), a photo of the customer, and an ID document photo where relevant. The shop's location is captured automatically. The Admin then marks whether this is an **Add Key** visit (the customer already has a working key and wants a spare) or a **Lost Key** visit (the original is missing), fills in a few category-specific details such as the vehicle number, and saves the record.

The whole process typically takes under a minute, and at the end the shop can immediately download a proper PDF compliance report or send it straight to the customer over WhatsApp.

4.2 – CUSTOMER HISTORY & THE COMPLIANCE REPORT

Every visit a shop has ever logged stays searchable in one place, by customer name, phone number, or location. Any past record can be reopened to view its full details or to re-download and re-share its report at any time — nothing is ever regenerated from scratch, so the report a customer receives today will read identically if downloaded again next year.

4.3 – THE MASTER KEY CATALOGUE, EXPLAINED SIMPLY

Beyond each shop's own records, Kee keeps one platform-wide list of every key that has been duplicated (not lost) for a recognised vehicle category, across every shop. This is deliberately narrower than the full customer history: a Lost Key visit, or a visit for a category the platform doesn't specifically track, never enters this shared list. The result is a focused, cross-shop reference — useful for checking whether a particular key has already been cut somewhere on the network — without being cluttered by every single visit type. Shop Admins can search their own shop's cut keys; the Super Admin can search the entire platform.

MACHINES & MARKETING

How shops list what they sell, and how the platform advertises on their behalf.

5.1 – MACHINES & PRODUCT LISTINGS

A shop can list the key-cutting machines, tools, or other products it has for sale or use, each with up to four photos, a description, and a price. These listings appear both on the shop's own public page and in the platform-wide Machines/Products directory, where any visitor can browse and filter by location. The Super Admin can post listings the same way, for platform-level offers or partner products.

5.2 – ADVERTISEMENTS & PROMOTIONS

The Super Admin runs advertisement campaigns that appear in three places: a scrolling banner carousel on the app's home screen, a pop-up notice, or a full-screen poster shown the moment the app is opened. Each campaign has a date range, a priority order, and can be shown to every shop or targeted at a specific list — giving the platform a way to promote its own offers, seasonal pricing, or partner announcements directly to shop owners and the public.

ORBENYX

RUNNING THE PLATFORM (SUPER ADMIN)

The tools the platform owner uses to keep the whole network healthy.

6.1 – OVERSEEING SHOPS & SUBSCRIPTIONS

The Super Admin has a complete directory of every registered shop, with the ability to view full details, edit a profile on a shop's behalf, or suspend a shop (for example over a lapsed subscription or a compliance issue) — a suspended shop's staff are blocked from logging in until it's reactivated. Subscriptions can be created or renewed manually when needed, and the shop-category list, key-type list, and product-type list — all the curated dropdowns shop owners see during registration and daily use — are managed centrally from here too.

6.2 – REVENUE TRACKING & SUPPORT

A simple monthly revenue log lets the Super Admin record platform income by month, building up a running picture of the business over time. A Support Configuration screen controls the WhatsApp number, contact email, and help videos shown to shop owners across the app, so support information can be updated in one place without needing a new app release.

The logo is a large, faint watermark in the background of the page. It features a stylized, symmetrical emblem above the word "ORBENYX" in a bold, sans-serif font.

THE COMPLETE PICTURE

How every piece connects, from a shop's very first visit to daily use.

7.1 – END-TO-END JOURNEY, START TO FINISH

Fig. 1 – A shop's journey from sign-up to daily operation, alongside the parallel Super Admin and public-visitor experiences running on the same platform.

7.2 – KEY BENEFITS

Proper compliance records

Free public storefront per shop

One-minute customer registration

Instant PDF / WhatsApp reports

Cross-shop Master Key search

Referral rewards for growth

Recurring subscription revenue

Centralised advertising

Six-language support

Works on web and native Android

7.3 – PLAIN-LANGUAGE GLOSSARY

Shop Admin

A registered key shop's login — the person who runs the shop's day-to-day use of the platform.

Super Admin

The platform owner's account, overseeing every shop on the network.

Compliance record

The saved entry created every time a key is duplicated or replaced — the core record the platform exists to keep.

Master Key catalogue

The shared, cross-shop list of duplicated keys for recognised vehicle categories — not the same as a shop's full visit history.

Subscription

The paid period that keeps a shop's account active on the platform.

Listing

A machine or product a shop has posted for sale, shown in the public Machines/Products directory.

Campaign

An advertisement (banner, pop-up, or full-screen poster) run by the Super Admin for a set date range.

PLACEHOLDER COMPANY DETAILS

Every business detail on the cover page — address, phone, email, website — is a placeholder for Orbenyx's real information. Replace before sending to the client.
