fields for client review

TABLE OF CONTENTS

Read start to finish, or jump straight to the task at hand.

GETTING STARTED

- 1.1 Who uses Kee & how to reach it
- 1.2 Login & authentication

SETTING UP A SHOP

- 2.1 Shop creation (self-registration & payment)
- 2.2 Shop settings

DAILY OPERATIONS

- 3.1 New customer registration
- 3.2 Customer history & reports
- 3.3 Master key catalogue & search

MACHINES & INVENTORY

- 4.1 Adding a machine / product listing
- 4.2 Machine management

MARKETING & ADVERTISEMENTS

- 5.1 Creating an advertisement campaign (Super Admin)
- 5.2 Viewing offers & ads (Shop Admin)

PLATFORM ADMINISTRATION (SUPER ADMIN)

- 6.1 Shop management & dealers directory
- 6.2 Revenue log
- 6.3 Support configuration

SUPPORT & REFERENCE

- 7.1 Customer support & help
- 7.2 Troubleshooting
- 7.3 Glossary

ORBENYX

GETTING STARTED

Two account types, plus a public layer nobody has to sign in for.

ROLE

SUPER ADMIN

One platform-wide account. Oversees every shop, the master key catalogue, platform revenue, and every advertisement/promotion/support setting shown across the network.

ROLE

SHOP ADMIN

One account per registered shop, created through the public self-registration flow. Manages the shop's own profile, registers customer visits, lists machines/products, and browses active offers.

NO ACCOUNT NEEDED

PUBLIC VISITOR

Anyone browsing keyshops.in or the Kee Android app before signing in. Can search shops and machines, view offers, and start a shop registration.

Kee is available two ways, and both point at the same account and data:

- **Web:** any browser at **keyshops.in**.
- **Native Android app:** installed from the download link on the website. The native app additionally lets a visitor browse shops and machines without any internet detour through a browser, and verifies phone numbers directly against the device's SIM where supported.

1.2 – LOGIN & AUTHENTICATION

- 1 Open keyshops.in (or the app) and tap **Login**.
- 2 Enter the email address **or** registered mobile number, plus the password. Either identifier works with the same password.
- 3 Tap **Sign in**. If the account is a Shop Admin whose shop has been suspended by the Super Admin, sign-in is blocked with a message to contact support — otherwise the Dashboard loads immediately.
- 4 Forgotten password? Tap **Forgot password?**, enter the registered phone number, and enter the SMS one-time code to set a new password.

RATE LIMITING

Login and password-reset attempts are capped (10 login attempts / 6 password resets per 10 minutes per account) to block brute-force guessing. A locked-out account simply needs to wait for the window to pass.

Fig. 1 – The sign-in decision path, including the shop-suspension check and the separate forgot-password recovery path.

SETTING UP A SHOP

From "I don't have an account yet" to a working, paid Shop Admin login.

2.1 – SHOP CREATION (SELF-REGISTRATION & PAYMENT)

A new shop account is created entirely through the public website or app — there is no separate admin step to manually add a shop first (the Super Admin's own "Add Shop" screen exists for support cases, but the normal path is self-service).

- 1 From the homepage, tap **Create shop account** (or **Shop Admin? Download the app** on mobile, then register inside the app).
- 2 Enter the **shop name**, **owner name**, and **mobile number**. Email is optional — the account can be created and logged into using just the phone number.
- 3 Choose a **shop category** from the dropdown (e.g. Key Shops, Dealers, ECM Service) — this list is curated by the Super Admin.
- 4 Tap **Send OTP**, enter the 6-digit code received by SMS, and confirm.
- 5 Tap **Current Location** to auto-fill town, district, state and PIN code from GPS (or type the address manually if location access is unavailable).
- 6 Continue to **Payment**. The screen shows the subscription price plus GST, both set centrally by the Super Admin.
- 7 Complete checkout through the Razorpay payment screen (card, UPI, netbanking, or wallet).
- 8 On a successful, verified payment, the shop account and login are created automatically and the new Shop Admin is signed in straight into the Dashboard.

WHY PAYMENT HAPPENS BEFORE THE ACCOUNT EXISTS

The backend never creates a Shop or User record until Razorpay's payment signature has been cryptographically verified server-side. A failed or tampered payment simply means registration doesn't complete — there is no way to get a working login without a genuine successful payment.

Fig. 2 – End-to-end shop creation, from the registration form to a working login.

2.2 – SHOP SETTINGS

Reached from the sidebar (or the mobile bottom navigation's gear icon). Everything here belongs to the shop and is visible only to that Shop Admin (and the Super Admin).

- 1 Profile:** edit shop name, category, address, GST number, and an optional website URL.
- 2 Logo:** upload a square logo image — shown on the shop's public listing and product/machine cards.
- 3 Documents:** upload supporting shop documents (licence, ID proof) for the Super Admin's records; remove a document at any time.
- 4 Login credentials:** change the password, or update the registered phone/email — both changes are OTP-verified before they take effect, so an account can't be silently taken over even by someone already inside the dashboard.
- 5 Referral & Rewards:** the shop's own referral code (its registered phone number), points earned so far, and the list of shops referred.

DAILY OPERATIONS

The core, everyday task Kee exists for: logging a customer's key-duplication or key-loss visit.

3.1 – NEW CUSTOMER REGISTRATION

From the Dashboard, tap **New Customer**. The form is a single page with the following steps.

- 1 Choose a **category icon**: Two-Wheeler, Four-Wheeler, Truck/Lorry, Home, or Office.
- 2 Enter the customer's **name** and **phone number**, then verify by SMS OTP.
- 3 Capture the customer's **photo** via the device camera (or upload one). Capture an **ID document photo** where relevant.
- 4 **Location** is captured automatically via GPS the moment the form opens — no manual step needed unless location access is denied, in which case a retry prompt appears.
- 5 Choose **Add Key** (a working key exists and a duplicate is being cut) or **Lost Key** (the original is missing).
- 6 Fill the remaining category-specific fields — vehicle number and key type for vehicles, or property details for home/office — then review the summary.
- 7 Tap **Save Record**. A confirmation screen offers the compliance report as a **PDF download** or a direct **WhatsApp share** to the customer.

Fig. 3 – The Master Key auto-create is guarded behind both the Add Key flag and a recognised vehicle category.

3.2 – CUSTOMER HISTORY & REPORTS

Every past visit logged for the shop, in one searchable list.

- Search by customer name, phone number, or location.
- Filter by location using the district/town dropdown.

- Open any record to view full details, or re-download/re-share its PDF report at any time — reports are stored, not regenerated from scratch.

3.3 – MASTER KEY CATALOGUE & SEARCH

Every Add Key visit with a recognised vehicle category, from every shop on the platform, lands in one searchable catalogue — useful for confirming whether a key code has already been duplicated somewhere else. Shop Admins search their own shop's cut keys from **Search Keys**; Super Admins can search the entire platform from **Master Catalogue**.

MACHINES & INVENTORY

The public-facing product listings shown under Used Machines, ECM, Meter, and Scanning categories.

4.1 – ADDING A MACHINE / PRODUCT LISTING

- 1 Open the relevant category (e.g. **Used Machines**) and tap the + floating button.
- 2 Enter a **title** and **description**.
- 3 Choose a **product type** from the Super-Admin-managed category list (e.g. ECM, Key Cutting Machines, Meter, Scanning).
- 4 Set a **price**, and optionally a **discount percentage** to show a struck-through original price alongside the discounted one.
- 5 Upload up to **4 photos**. The first photo becomes the card's cover image; all photos appear in the swipeable gallery on the listing's detail page.
- 6 Enter a **contact phone number** — shown as a tap-to-call button on the public listing (required on every listing).
- 7 Tap **Save**. The listing appears immediately in the public Machines/Products directory, filterable by category and location.

4.2 – MACHINE MANAGEMENT

- **Edit:** open any listing card and tap Edit to change any field or replace photos.
- **Remove:** delete a listing once it's sold or no longer available — this is immediate and does not affect past customer records, which are entirely separate.
- **Browse & filter:** the grid supports search-by-keyword and a location filter; the same grid (read-only) is what public visitors see.

MARKETING & ADVERTISEMENTS

Platform-wide promotional content, created by the Super Admin and seen across every shop's dashboard and the public app.

5.1 – CREATING AN ADVERTISEMENT CAMPAIGN (SUPER ADMIN)

- 1 Open **Banner & Offer Management** and tap + **New Campaign**.
- 2 Enter a **title** and upload a **creative banner image**.
- 3 Choose the **ad format**: **Main Banner** (shown inline on dashboards and the public site), **Interactive Login Popup** (shown once on the login screen), or **App Open Poster** (a full-screen promo shown when the native app is opened or resumed).
- 4 Set the **start date** and **end date** the campaign should run.
- 5 Set a **priority** number — higher-priority campaigns are shown first when multiple are active at once.
- 6 Choose targeting: **all shops**, or a specific selected list of shops.
- 7 Tap **Publish**. The campaign goes live immediately and automatically stops showing after its end date.
- 8 Edit or cancel an active campaign at any time from the same screen.

5.2 – VIEWING OFFERS & ADS (SHOP ADMIN)

From the Dashboard's **Offers** card (or **Offers, Ads & Banners** in the sidebar), a Shop Admin sees a read-only feed of everything currently live: active banners, popups, and any independent platform-wide offers. Tapping a banner opens it full-screen.

PLATFORM ADMINISTRATION

Screens only the Super Admin account can reach.

6.1 – SHOP MANAGEMENT & DEALERS DIRECTORY

- **Shop Management:** every registered shop — add one manually, edit details, suspend/reactivate an account, or reset a shop's password. Filter by location or subscription status.
- **Dealers Directory:** the same public-facing shop listing customers see, for the Super Admin's own reference — search by name, location, or category.

6.2 – REVENUE LOG

- 1 Open **Revenue Log**.
- 2 Fill in **month, year**, the **amount collected**, and optional notes for a subscription payment received.
- 3 Tap **Log Revenue Payout**. The record appears in the history table and the running totals (all-time, this year) and monthly chart update immediately.

6.3 – SUPPORT CONFIGURATION

The single source of truth every Shop Admin's own **Customer Care/Support Contact** screens read from:

- Customer-care WhatsApp number, email, and phone.
- Subscription price and GST percentage — changing this here changes what every new shop is charged at registration.
- Skill-upgrade training video links.
- Shop categories and product types — the dropdown options every registration/listing form pulls from, reorderable by drag-and-drop.

SUPPORT & REFERENCE

Where to go when something doesn't work as expected.

7.1 – CUSTOMER SUPPORT & HELP

Two related screens, both reachable from the sidebar or the mobile bottom navigation's support icon:

- **Customer Care:** skill-upgrade training videos for shop staff.
- **Customer Service / Support Contact:** the platform's support phone, WhatsApp, and email, plus Orbenyx's own company details.

7.2 – TROUBLESHOOTING

SYMPTOM	LIKELY CAUSE & FIX
OTP never arrives	Check the number was entered correctly and has signal; wait for the resend timer, then tap Resend once.
Location won't auto-fill	Location permission is denied, or GPS is off — enable it in device settings, or enter the address manually.
Login says "shop suspended"	The Super Admin has paused the account, usually for a subscription or compliance issue — contact support to resolve.
Payment succeeded but no account	Very rare — the payment signature failed verification. Contact support with the Razorpay payment ID; no charge is retained without a working account.
Photo/document won't upload	File is likely too large or an unsupported format — use a standard JPG/PNG photo under a few MB.

7.3 – GLOSSARY

Master Key

A platform-wide catalogue entry auto-created whenever a Shop Admin logs an Add Key visit with a recognised vehicle category — searchable by every shop, not just the one that created it.

Compliance record

The saved Customer entry (photo, ID, GPS, vehicle/property details) created every time a key is duplicated or replaced — the core record Kee exists to keep.

Listing

A machine/product entry shown in the public Machines/Products directory, distinct from a customer compliance record.

Campaign

An advertisement (banner, popup, or app-open poster) created by the Super Admin and shown across shop dashboards and/or the public app for a set date range.

PLACEHOLDER COMPANY DETAILS

Every business detail on the cover page — address, phone, email, website — is a placeholder for Orbenyx's real information. Replace before sending to the client.
